

Motion Detector Alarm with Telephone Dialer

Model: MA80

COMPACT PIR MOTION DETECTOR ALARM WITH TELEPHONE DIALER

Installed in seconds the MA80 provides a low cost but effective motion detector alarm. Once armed the PIR sensor detects movement in the protected area and triggers the alarm for auto dialing and alarm sound.

KEYPAD, AUTO DIALER AND ALARM

With built in auto dialer for dialing up to 3 programmable telephone numbers. The MA80 can be armed and disarmed with a personal 4 digit code which is programmed into the system using the keypad. Once armed and infra-red beam monitors movement up to 7 meters away at an angle of 140 degrees. If movement is detected, it will auto dial to pre-set telephone numbers and will provide alarm sounds after an entry delay 20 seconds. The siren will sound for 30 seconds then automatically reset.

24 HOURS HOME SECURITY

Just simply plug the telephone cable to the telephone socket. 24 hours stand by home security.

Once armed the PIR sensor detects movement in the protected area triggers the alarm and activate auto dialing to preset telephone number.

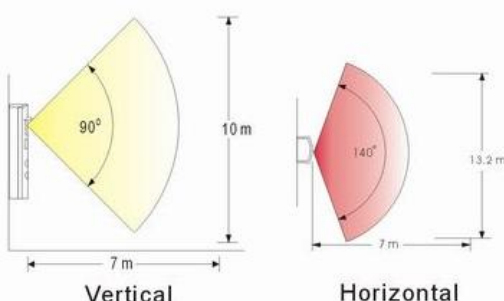

FEATURES
