

High Voltage Probe Model: HV-60

1000M Ω , 0 ~ 25kV or 30kV / Length 1.2m

Description:

The probe is a high DC voltage probe for the measurement of very small current. It is available for measuring voltage of high impedance circuits, such as CRT anode voltage of TV set and high voltage for focusing.

Connected with a digital or an analog multimeter, the probe is capable of measuring high DC voltage.

Made in Japan
