

Robot Arm

This kit allows you to build a robotic arm that can grasp anything up to 1.7 inches in width, lift objects weighing up to 100g, using its LED to provide you with a search light, and much more.

The wired control robot arm kit comes disassembled so it's an ideal way to learn about basic robotic technology. If you know anyone that wants to come up with next great invention then this would be a perfect way to get them started. It has five motors all controlled via the hand set which allows you amazing, precession movements.

Features:

- Build it yourself robot
- Learn basic robotics
- 5 motor control handset
- LED light for night time operations
- No soldering required
- Dimentions: 22.8cm x 16cm x 38cm
- Powered by 4 x D size batteries.

Made in USA
