

ARDUINO LCD1602 KEYPAD SHIELD V2.0

Description:

the latest Arduino LCD1602 keypad shield v2.0 collect all the advantages of many shields at home and abroad. PCB with immersion gold process, mainboard adopt new high-quality 2 lines16 characters LCD, not only has the contrast adjustment knob, the backlight selector switch, 4 direction keys, 1 select keys and a reset button, four sensor analog interfaces , RB URF v1.1 ultrasonic sensor interface, bluetooth module interface, APC220 wireless digital communication interface, easy-to-use for independent expansion. F.or beginners of Arduino, the 1602 LCD Keypad Shield v2.0 in the true sense will simplify the circuit. Inserting it into Arduino Duemilanove controller directly , a 3p sensor connecting line to connect, the sensor data records will be displayed easily.

Features :

- This is a 16x2 LCD Keypad module for ARDUINO / Arduino Diecimila Duemilanove / FREEDUINO board..
- Blue Backlight with white words
- uses 4 Bit Arduino LCD Library
