

ARDUINO PROTOTYPE SHIELD

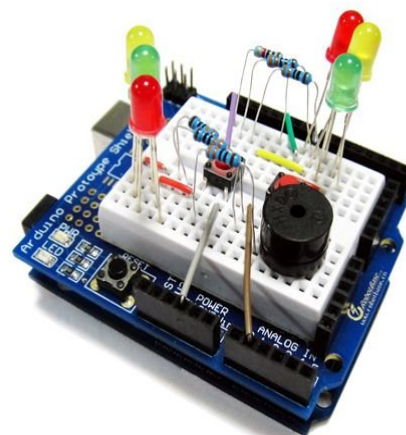

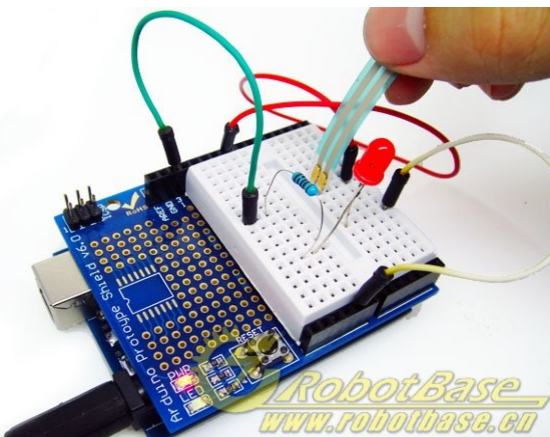

Description:

The latest Arduino Prototype Shield v6.0 adopts the PCB immersion gold process, mainboard aureate quadrate ,pad spacing is small,welding components more convenient, SOP14patch components encapsulation, it is handy for Arduino electronic lovers and will not be bound by interpolation components; The board can be inserted into Arduino MEGA controller seamlessly , component can be welded on it directly, finish prototype circuit.you can also stick the mini bread board, through 7 colour jumper line and finish circuit experiment, there are integrated power indicator and the status indicator lamp, and reset button, it is a good choice for you to learn Arduino MEGA controller easily

PCB immersion gold,selected material:

Construct simple experiment circuit:

Abundant supply:
