

Arduino Infrared Wireless Remote Control Kit

Features:

- Ultra-thin infrared remote control and 38 KHz infrared receiver module.
- Transmitting distances of up to 8 meters, ideal for handling a variety of equipment in the room.
- IR receiver module can receive standard 38 KHz modulation remote control signal.
- Through the Arduino programming, you can achieve remote control signal decoding operation, which can produce a variety of remote control robots and interactive works.
- Through their own programming infrared remote control.

Made in China
