

CRIMPING SPLICES PROSKIT 1PK-CT006

- **CRIMPING:** This typically refers to the process of joining two pieces of metal or other ductile materials by deforming one or both of them to hold the other. In the context of electrical work, crimping is often used to attach connectors to wires.
- **SPLICING:** This is the process of joining two wires together to ensure a continuous electrical connection. This can be done through various methods, including crimping, soldering, or using splice connectors.
- **Pro'sKit:** This is a brand known for producing a wide range of tools and equipment, including those for electronics, telecommunications, and general hand tools.
- **1PK-CT006:** This is likely a specific product code or model number. It could refer to a crimping tool, a splice connector, or a kit that includes both.
