

Tip Refresher

Model: BS-2

PRODUCT SPECIFICATIONS

When the tip surface starts to oxidize during operation, it becomes dark and does not wet properly. To improve work efficiency, use the Tip Refresher.

HOW TO USE

- 1- Optimum tip temperature for refreshing the tip is from 300-360°C.
- 2- Dip the tip in the Tip Refresher.
- 3- Apply solder to the tip and then clean completely with the sponge on the soldering iron stand (goot ST series).
