

IRDA SMD&BGA REWORK STATION

Description:

- 1.infrared + Preheating system and the system
- 2.control preheating sprated, quality is a more stable light 3.soft

Feature of YAXUN 866D + Infrared preheater:

- 1.STN - Viewing screen liquid crystal display of all functions
- 2.Special infrared heating, rope strong and difficult to damage to peripheral devices to heat also breaks down the traditional welding machine hot air shortcomings of thermal radiation
- 3.using equipment infrared light source glare soft focus on the stability of the heat
- 4.The infrared heating with preheater 600W demolition of welding equipment, large-scale demolition of the benefit of BGA solder

Specifications:

- 1-Input voltage: 220V/50Hz C.A.
- 2-Infrared input power: 150W
- 3-Infrared temperature: 100 - 350 ° c
- 4-Preheater power input: 600W

Made in China
