

SLD902 + Display

1. Specification:

Power supply	:220V AC
Power	:320W(MAX)
Air pump	:Diaphragm special-purpose lathe pump
Capability	:23L/min(MAX)
Temperature	:100°C-480°C

2. Function:

- Close loop with sensor. Temperature control with digital display. Easy to adjust. Quickly heated from power on.
- Static defense. Prevent the fault of PCB from static and leak electricity.
- The situation of moving accessories or accessories are over heated could be avoided by the method that to weld without touch the welding point.
- The temperature and airflow could be adjusted in a wide range, is applied to OFP and SOP type IC. According to the application different type of muzzle could be selected to weld or remove the solder.
- The heat part of the product is imported. And the muzzle is in same quality with international brand.
- The blowing part keeps working after job is finished this function can extend the life of heater and handle.
- The real temperature and the temperature specified by operator are all could be displayed.
