(STAR2 PERIPHERAL DEVICES)

OPERATOR CONSOLE SET:

1. It consists off a functional telephone set attached to a busy lamp field module with single touch calling buttons. It is possible to connect up to twenty key set telephone to the exchange.

BATTERY MODULE:

1. It is used to connect the batteries to the exchange for the mains failure.

BATTERY:

1. Two batteries with 12V and max 10 hour capacity is connected serially (24v)to the battery module. Batteries may last up to 4-6 hours depending on the conversation traffic of the system.

FCT (Fix to Cellular Gateway):

1. It is used for making cheap calls from the fix terminals to GSM network.

CALL ATTENDANT (VOICE OPERATOR):

1. It answers the incoming calls and allows the calling side to dial the internal extension numbers. One or two channel call attendant may be connected to the exchange.

MUSIC ON HOLD DEVICES:

1. If the built-in music on hold is not used it is possible to connect

a radio/discman to the exchange. A special recorded music on hold device may also be connected.

12/16 KHZ CHARGING DETECTOR:

1. If the external lines of the exchange have 12/16 KHz charging signals a 12/16 KHz detector is inserted to the exchange for detailed charging records of the calls.

LIGHTNING PROTECTOR:

1. If the exchange is installed in place where the lightning is very often effective it is recommended to protect the exchange external lines with an extra protection. One lightning protector device may serve for 2 or 4 external lines.

PC PROGRAM FOR CALL LOGING:

1. It is possible to connect the exchange to a computer loaded with ET2000 program for detailed call logging.
