

Magnetic head cleaner

KONTAKT CHEMIE Video 90

Description:

Quick-drying solvent cleaner, leaves no residue and neutral on materials.
Does not contain aromatic and chlorinated hydrocarbons.

General properties and applications:

KONTAKT CHEMIE Video 90 is an outstanding special cleaner for all magnetic recording equipment. Its gentle cleaning power makes it particularly suited to sensitive components or materials.

It is used in video recorders, tape recorders, cassette recorders, projectors or disk drives, where it removes dirt from tape wear, dust, oil or grease without leaving a residue. KONTAKT CHEMIE Video 90 cleans magnetic heads and ensures clear images and a pure sound.

Technical data

Odour		Mildly of solvent
Flash point	ASTM D 56	< 0°C
Evaporation rate (ether=1)	DIN 53 170	1
Boiling range	ASTM D 1078	40 °C to 65 °C
Density	ASTM D 891	0.67 g / cm ³
Surface tension	ASTM D 971	17 mN/m

Application instructions:

KONTAKT CHEMIE Video 90 cleans all picture and recording heads safely and leaves no residue. The aerosol also sprays upside down and comes with an extension tube, allowing easy cleaning of small parts. Brushing or wiping improves the cleaning effect.

KONTAKT CHEMIE Video 90 has a low flash point and therefore dries very quickly. Because the product is flammable, ensure there are no ignition sources (naked flames, sparks, incandescent surfaces) nearby when working. The product must also not be used in live electrical sub-assemblies. The cleaner must be completely evaporated before electrical equipment is switched on.

Ensure the workplace is well-ventilated when using this product. Additional safety information can be found in the safety data sheet.

Available:

Aerosol ,100 ml, 200 ml, 400 ml
