

CAT 5 TESTER PROSKIT MT-7058

The **Proskit MT-7058** is a network cable tester designed for testing and troubleshooting Ethernet cables, including Cat 5, Cat 5e, and Cat 6 cables. It is a handheld device that helps verify the continuity, wiring faults, and miswiring in network cables. Here are some key features and functions of the Proskit MT-7058:

Key Features:

1. **Cable Testing:**
 - Tests for open circuits, short circuits, reversed pairs, crossed pairs, and split pairs.
 - Supports testing for Cat 5, Cat 5e, and Cat 6 cables.
2. **Wire Mapping:**
 - Displays the wiring sequence of the cable to ensure proper connections.
3. **Length Measurement:**
 - Measures the length of the cable (up to a certain distance, depending on the model).
4. **Portable and Easy to Use:**
 - Compact and lightweight design for easy portability.
 - Simple operation with clear LED indicators for test results.
5. **RJ45 and RJ11 Compatibility:**
 - Supports testing for both RJ45 (Ethernet) and RJ11 (telephone) connectors.
6. **Power Source:**
 - Typically powered by batteries (e.g., 9V battery), making it convenient for field use.

How to Use:

CAT 5 TESTER PROSKIT MT-7058

1. **Connect the Cable:**
 - Plug one end of the cable into the main unit and the other end into the remote unit.
2. **Power On:**
 - Turn on the tester and select the appropriate mode (e.g., wire mapping, continuity test).
3. **Read the Results:**
 - The LED indicators will show the status of each wire in the cable. A proper connection will light up the corresponding LEDs in sequence.
4. **Troubleshoot:**
 - If there is a fault (e.g., open circuit, short circuit), the tester will indicate the issue, allowing you to identify and fix the problem.

Applications:

- Network installation and maintenance.
- Troubleshooting Ethernet cables in offices, data centers, and homes.
- Verifying cable integrity before deployment.
